

E-COMMERCE SALES ANALYSIS DASHBOARD USING POWER BI

Submitted By: Pallavi Bhausheb Thosar
Class: TYBSc Computer Science
College: SMBST College, Sangamner

Certificate

This is to certify that Miss Pallavi Bhausahab Thosar of TYBSc Computer Science, SMBST College, Sangamner, has successfully completed the project 'E-Commerce Sales Analysis Dashboard Using Power BI'.

Acknowledgement

I express my gratitude to my teachers, department and college for their support and guidance during this project.

Abstract

The project analyzes e-commerce sales data using Power BI and presents insights through interactive dashboards.

Introduction

Power BI is a business intelligence and data visualization tool used to transform raw data into meaningful insights.

Objectives

1. Analyze sales performance 2. Identify profitable categories 3. Compare regional performance 4. Create interactive dashboards

Tools and Technologies

Power BI Desktop, Excel/CSV Dataset, Data Visualization.

Dataset Description

Dataset contains Sales, Profit, Quantity, Category, Region, State, Segment and related fields.

Methodology

Data Collection → Data Import → Data Preparation → Dashboard Creation → Analysis.

Dashboard Results

Total Sales: 2.30M, Total Profit: 286.40K, Total Quantity: 38K. Technology category achieved highest sales.

Findings

Technology category performed best. West region contributed strongly to overall sales.

Conclusion

The dashboard successfully provides business insights and supports decision making.

Future Scope

Monthly trends, customer segmentation, SQL integration and real-time dashboards.
